

Stop & Frisk, The New York City Police Department

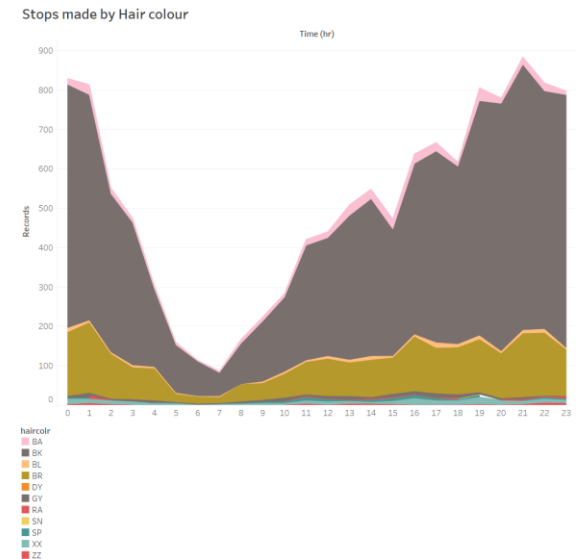

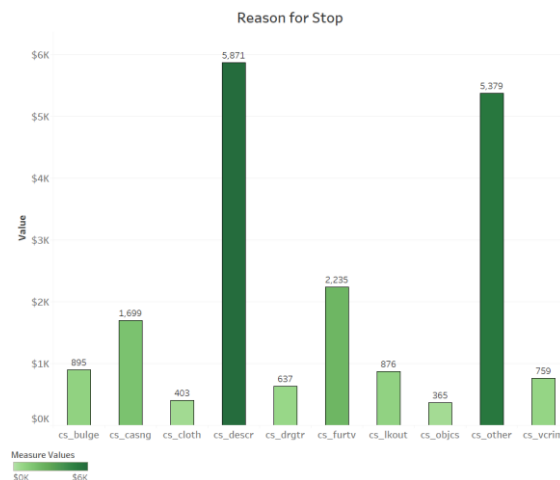

Vinay Gor

STEVENS INSTITUTE OF TECHNOLOGY

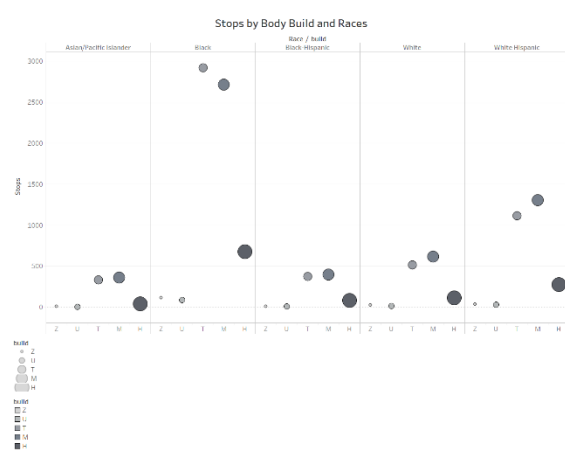

In the year 2016 **total stops** made were **12404** out of which almost two-third times the people were Friskd. On certain valid assumptions 2958 people were searched and out of which **2643** people were **arrested** overall. **79%** of the people who were stopped were **innocent** and **21%** of the people who were stopped were **arrested**.

Brooklyn had maximum number of **Stops**, **Friskd**, and **arrested**.

Most stops happened from **7 pm to 1 am**.

Black people who were **Thin, Muscular, or heavy constituted** for **50%** of all stops. **White people** with same physical characteristics only accounted for **10%** of all stops. Black people were stopped more than any other race which led to controversial “stop and frisk” policy based on race.

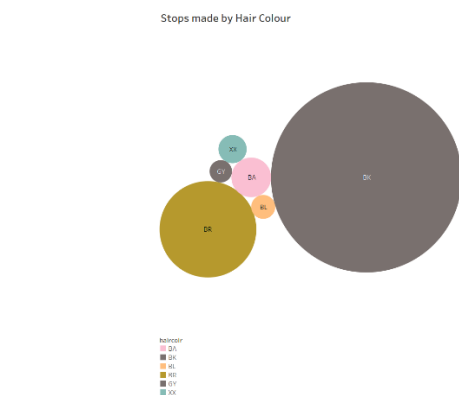

Stops made based on description for Brooklyn

Most stops made were based on **relevant description**. Relevant descriptions can be Hair color, Eye color, Build, Height, Weight, etc.

Half of all the stops made were based on **relevant description**.

Furtive movements were also one of the **top factors** for stops.

90% of all stops happened were hair color as either **Black or Brown**.

Description wise stops by races and cities

Across cities like **Bronx, Brooklyn, Manhattan, and Queens** most stops made were for **Black and White Hispanic** based on description.

Equal number of stops were made for **White and Black** based on **description** at **Staten Island**.

Asian/Pacific Islander people were **more frequently stopped** in **Queens** based on description as many communities of Asian/Pacific Islander reside in Queens.
